Autonomous agents frequently deviate from core objectives due to undetected reasoning errors, causing

This Practical Playbook converts abstract goals into granular, bias-resistant operational steps, derived from

What's included:

- Integrated, peer-reviewed report** -- Ensures audit findings are accurate and validated through
- Concrete next actions** -- Provides immediate, executable steps to correct reasoning loops with
- Real public knowledge base** -- Anchors agent logic in verifiable data rather than model hallucinations
- Cognitive bias mapping** -- Identifies specific logical fallacies inherent in chain-of-thought
- Field-tested mission logs** -- Demonstrates the playbook's effectiveness in a complex, multi-

Who this is for:

This is designed for developers and founders building autonomous systems who struggle with agents "hallucinating"

Real example:

Before implementing this audit, my research agent failed to reach a conclusion in 7 out of 10 attempts due to

What you'll achieve:

- Reduce agent task failure rates by identifying logic gaps immediately.
- Cut down completion time for long-horizon tasks by an estimated 30-50%.
- Achieve consistent, reproducible results from autonomous reasoning loops.
